RosterApps Application Changes – QA 24.44 / Production 24.44

October 15, 2024

Changes will be deployed to QA on Tuesday, October 15, 2024 and Production on Thursday, October 31, 2024

RosterApps Enhancements

RAPD-15038 EVB - Add option to use shift hours if available on award

Location Admins now have the option to have the run awards process use shift hours rather than the default hours when determining the number of hours to charge for an award.

A new setting has been added to the Hours Charged screen in both the "Hours charged for Weeks based on entered value for each employee" and "Based on status and years of service" options.

RAPD-15039 EVB - Alert when assigning bid lines for a vacation week when employee lacks accruals

As a Location Admin, when publishing shifts, if an employee has an awarded vacation week that is being assigned shifts and does not have sufficient accruals to cover all shifts, an alert will be sent to the Location Admin and Employee so that they are made aware that a change to the awarded vacation weeks will be needed.

The alert for the Location Administrator will appear in the associated bid package via new link, "View vacation hours conflicts":

☑ Hide dismissed alerts

| Employee Name	Vacation Week	Handled By	Date Handled	Comment	
Chad Berger	11/03/2024				Dismiss
Chad Berger	11/10/2024				Dismiss
Breanna Bray	08/25/2024				Dismiss
Breanna Bray	09/15/2024				Dismiss
Gemma Rosales	09/08/2024				Dismiss

From the Employee side, they will see a notification in their Announcements section of their home page. This notification will remain until the location admin dismisses it.

RAPD-14512 Accumulator Filter - Add Time Range options (Time & Attendance)

As part of the Accumulator Filter within Time & Attendance, the Time Range options have been modified. The first three options previously existed and have not changed. The options are now as follows:

- **None** – time range of shift will not be considered

- **Any hours in range (previously "Entire shift")** – if any hours of the shift fall within the specified time range, then the entire shift will be included in the filter

- **Only hours in range** – if any hours of the shift fall within the specified time range, then only those hours will be included in the filter

- **Entire shift in range** – if all hours of a shift fall within the specified time range, the entire shift will be included in the filter

- **Majority of shift in range (>= 50%)** – if the majority of hours fall within the specified time range, the entire shift will be included in the filter

Resolved Bugs

RAPD-15015 (ZD 66188) – One-Way Trades not showing on timecards (Time &Attendance)

This fix resolves an issue where one-way trades were not correctly getting paid in certain situations. The system was only considering two-way trades, which resulted in the timecard being incorrect.
