

ARCOS Application Changes - Production 25.04 and 25.06

February 6, 2025

Changes will be deployed to QA on Tuesday, January 21, 2025, and Production on Thursday, February 6, 2025

- Crew Manager Enhancements..... 1
 - Updated Logic for the RA_EVENT Attribute 2
 - Updated Crew Name Mouse Over..... 3
- Platform Enhancements 4
 - Updated! Assign Multiple Security Groups to a User 5

Crew Manager Enhancements

Updated Logic for the RA_EVENT Attribute

What is changing:

ARCOS has updated the logic for the RA_EVENT crew attributes, so that events are automatically added to the list of attribute values. This will make it easier for customers to update filters for storms.

Who is involved:

All Crew Manager customers with Resource Assist will receive this update.

What you need to do:

No further action is necessary to implement this change. If you wish to use this attribute, you will need to add it to the necessary view sets.

Updated Crew Name Mouse Over

What is changing:

When mousing over a crew's name, the mouse over now contains the crew's full name.

Who is involved:

All Crew Manager customers will receive this update.

What you need to do:

No further action is necessary to implement this change.

Platform Enhancements

Updated! Assign Multiple Security Groups to a User

What is changing:

ARCOS has added the ability to assign a user to multiple security groups. This can be done through the Employee Modify page, Employee Mass Modify page and the /employees API endpoint.

In the web application, the Security Group dropdown has been changed to a checkbox list. Check the checkbox next to security groups to add them to the user's list of security groups.

The screenshot displays a web application interface for assigning security groups. The 'Security Group' section features a list of groups with checkboxes: ☒ Admin, ☐ Rick Automation Test, ☐ TrevorTest1, ☒ Activations - None, ☐ Activations - Some Levels, ☒ Admin Old Mod, ☒ All but Web Login, and ☐ All Mobile Only. Below this, the 'Location Access' section has a dropdown menu currently set to 'All Access'.

Additional Notes

- For the employees API - "securityGroups" must be passed as a separate element on the employee.
 - Prior to the change security group assignments were returned and sent as: "sec_group_id" within the attributes array

```
40 {  
41   "key": "sec_group_id",  
42   "value": "Level 0"  
43 },  
44 }
```

- After the change, security group assignments will be returned and sent as “securityGroups”

```

    },
    "address": {},
    "securityGroups": [
      {
        "secGroupId": 1800,
        "secGroupName": "Cannot Change Locations"
      },
      {
        "secGroupId": 1804,
        "secGroupName": "Crew Manager Only"
      }
    ],
    "emails": [
      {
        "index": 1
      }
    ]
  }
}

```

- The Grant Temporary Security Access feature acts as an “and” and adds the temporary assignment to the user’s current list of security groups. No security groups will be removed.
- Assigning a user to multiple security groups acts like an “and”. If one of the assigned security groups has access, then the user will have access to the feature.
- Wherever a user’s security group is currently displayed, the user’s security groups will now be displayed coma separated.

Who is involved:

All customers will receive this update.

What you need to do:

With the 24.50 release to QA, all customers will receive this update. This change will be deployed to production for all customers with the 25.10 production deploy on Thursday, March 6. You may request this change sooner by reaching out to ARCOS Support or Professional Services.

Users should verify with their IT teams that their integrations will not be affected by the API changes prior to requesting this enabled in production. Once enabled in production, it will require manual work by the customer before we can revert the change.
