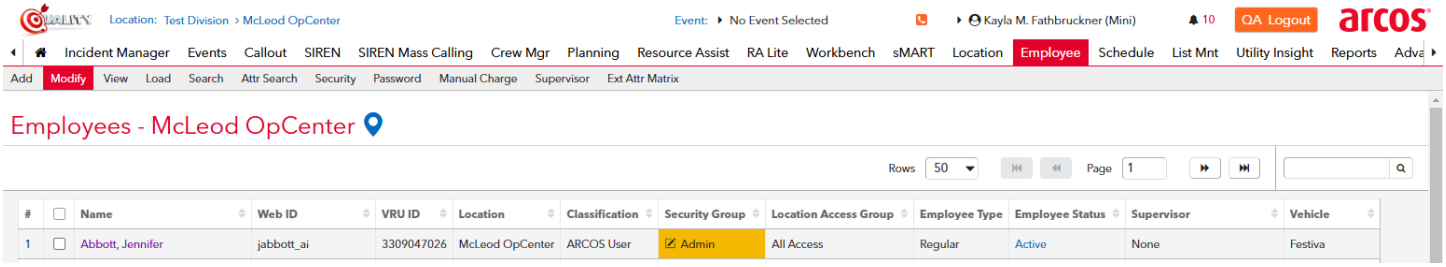
Employee Mass Modify Page Updates

What is changing:

ARCOS has added the ability to sort the columns on the Employee Mass Modify page.



The Employee Mass Modify page has also been updated to remember the last number of records to display that a user selected.

Who is involved:

All customers will receive this update.

What you need to do:

No further action is necessary to implement this change.

Update to how Admin Level Security Groups are Displayed

What is changing:

In ARCOS, admin level security groups are security groups that contain any of the following permissions: Security Add, Security Edit or Security Delete. In the past, the admin level security groups have been highlighted with a golden yellow.

With this change, we have removed the golden highlighting and have added a sheild icon to indicate which security groups are admin level.

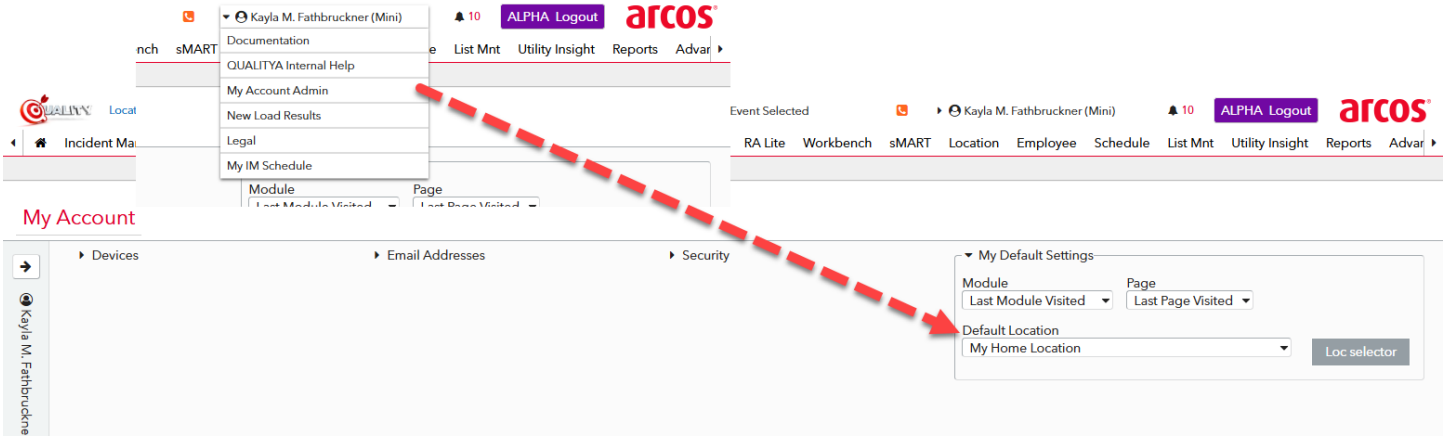
Users can set a Default Location

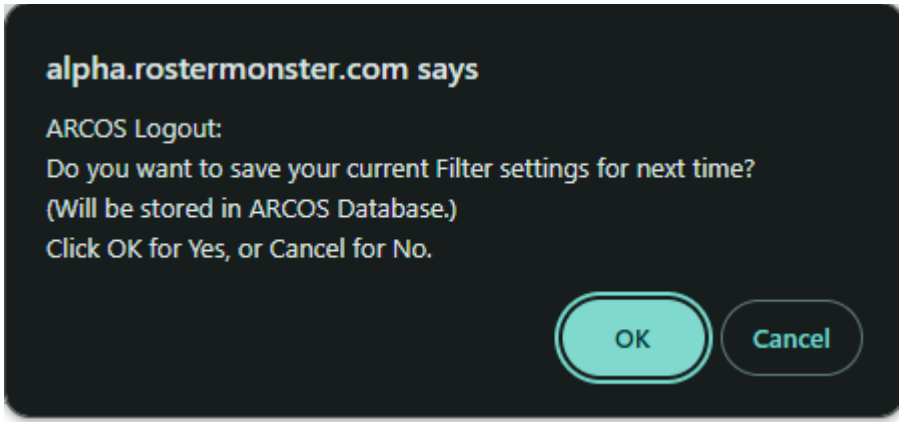
What is changing:

ARCOS has added the ability for users to save a default location. When a user sets a default location, their ARCOS location when they login will be the default location. Users can select a specific location, the last location they visited or their home location as their default location. By default, users will continue to be set to their home location when they login.

A user can update their default location by navigating to the My Account Admin page.



After selecting a default location, the user will need to click "OK" on the save filters pop-up when they logout.



Who is involved:

All customers will receive this update.
