Resolved Bugs

RAPD-16384 (ZD-73156) Meal Break based on Consecutive hours not working for overnight shifts

Fixed an issue where **splitting an overnight shift** changed how the **Meal Break based on consecutive hours rule** was applied. Employees were able to exploit this by splitting shifts in a way that effectively reduced **the required 60-minute meal break to 30 minutes**, resulting in **extra paid time per shift**.

After this fix, splitting a shift no longer changes the required meal break duration, and the configured meal break rules for consecutive hours are applied consistently, including **overnight shifts**.
